DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claim 12 recites the limitation "the expansion element " in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.
2. The following rejections are based on the best understanding of the claimed limitations.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1,2,11,12,15,16 and 17 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,2,3,4,8,9,10 and 20 of copending Application No. 10/643,912. Although the conflicting claims are not identical, they are not patentably distinct from each other because the invention claimed in the co-pending application of 10/643,912 comprises an outdoor unit installed at an outdoor location, and having therein a compressor and an outdoor heat exchanger; plurality of indoor units respectively installed at indoor rooms, each of the indoor units having therein an electronic

expansion valve and an indoor heat exchanger; a distributor provided between the outdoor unit and the plurality of indoor units, for introduced from the outdoor unit according to an operation condition; selectively guiding a refrigerant to the plurality of indoor units discharge side of the compressor, for selectively switching a flow direction of the refrigerant flowing through the outdoor heat a four-way valve (refrigerant flow control) provided on a exchanger; a first connection pipe branched from a pipe connecting an absorbing side of the compressor with the four-way valve, for connecting the distributor to guide the refrigerant (equivalent to third connection pipe connecting an suction inlet of the compressor with the distributor and having a mid portion in the claim); a second connection pipe (second connection pipe in the claim) branched from a the discharge side of the compressor pipe connecting with the four-way valve, for refrigerant; connecting the distributor to guide the a third connection pipe (first connection pipe in the claim) for connecting the outdoor heat exchanger with the distributor to guide the refrigerant; and a selective expansion apparatus provided on the third connection pipe and including a heating electronic expansion unit for selectively expanding the refrigerant.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

5. Claims 3-10,13,14 and 18-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
